WORK EXPERIENCE

Amazon

May 2022 – Aug 2022

Software Developer - Intern

Vancouver, British Columbia

- Engineered a microservice in **Java** to send notifications to **100mil+** customer of cashback on select products
- Ensured modularity by designing a plugin system for processing the customer orders for microservice
- Utilize **AWS** webservices such as **Lambda**, **SQS** and **SNS** to ensure scalability of the notification system

Intel

May 2021 – May 2022

Software Engineer - Intern

Toronto, Ontario

- Developed flagship product using **C++**, **Python** and **Bash** for speedup by re-routing the compilation
- Developed support software to generate 4000+ of completely random test-cases for edge-case testing
- Optimized support tool's Ram templates to reduce false positives and failing cases by around **70%**
- Migrated all 600+ failing regression test cases to the new compilation flow leading to decreased build failures

Centivizer

April 2020 - Sept 2020

Software Developer - Part-time

Toronto, Ontario

- Designed and wrote backend application using **socket.io**, **Node.JS** and **SimplePeer** to connect users via video
- Integrated video feature with user database through **RESTful API** using the **Axios** Library
- Decreased server load by re-working notification system to use a socket based approach

EDUCATION

University of Toronto

3.82 cGPA

BSc Computer Science Specialist, Major in Mathematics

Sep. 2018 – May 2023

Relevant Coursework: Data Structures and Algorithms (A+), Operating Systems (A+), Parallel Programming (A+), Neural Networks and Deep Learning (A+), Intro to AI (A+), Introduction to Machine Learning (A+)

PROJECTS

PAIR lab assistant | Private repo (paper under review)

Sep 2021 – present

- Built on top of Nvidia's Isaacsim to create a robot reinforcement learning **benchmark**
- Implementing a task-flow and environment randomizer for **causal reward** based research
- Utilize **pytorch** and **PPO** implementations such as **rsrl**, **rlgames** and **rllib**

Deep QLearning snake | Private repo

June 2021 – July 2021

- Utilized **pytorch** to write a Deep Q-Learning algorithm
- Played the snake game with DQL agent reaching a high score of **40** after **5** minutes of training

Tenant-Landlord Matching App | Links: server-side, client-side

Aug 2020 – June 2021

- Fullstack development of an mobile application to match landlords and tenants
- Constructed front-end using **React Native** and common packages such as **React Navigation** and **axios**
- Utilized **Node.js**, **GraphQL**, and database **Postgres** to construct backend

CaNetDa: Deep learning for GeoGuesser in Canada | Link: GitHub

Jan 2021 – April 2021

- Utilized a deep learning approach utilizing multiple deep learning techniques to have an AI play GeoGuesser.
- Utilized a **pytorch** implementation of **ResNet**, **EfficientNet** and **Vision Transformer** to predict the location
- With our approach, a accuracy of **60%** was consistently achieved out of 13 options

Tron UDP multiplayer | Link: GitHub

Sep 2019 – Dec 2019

- Created a four player game for local networks using the **UDP** network protocol and **C++**
- Forked** timer from the server to ensure the game runs on time
- Utilize **epoll** for both client and server to monitor the socket as well as the timer (server) and stdin (client)

BF-interpreter | Link: GitHub

Mar 2018 – Nov 2018

- Built **interpreter** that runs BF in C (runs all BF programs from [wikipedia](https://en.wikipedia.org/wiki/Brainfuck))

TECHNICAL SKILLS

Languages: Python, C/C++, JavaScript, Java, C#, R

Tools: Git, React Native, Node.js, MongoDB, SQL (Postgres), PyTorch, Numpy, Pandas, GDB, GraphQL
